

## The SectorTrends Newsletter

Released on 4/23/2007

This newsletter features short-term option picks. We use state-of-the-art mathematical models to scan 200,000+ options available in the market and select those with better chances to win.

Our option picking strategy fundamentally differs from those used by other online option services. We use a unique technique based on mathematical statistics to unveil the facts invisible at a glance. Our picks have better chances to win because they account for the following five factors:

1. Technical signals for the underlying stock
2. Technical trends of the corresponding industry/sector
3. Current stock strength in its sector
4. Current sector strength in the entire economy
5. Consistency with fundamentals

All professional money managers keep these factors in mind. However, it takes a long time to scan the market for all necessary inputs and compute the above parameters. Do you have this time? We do.

We take into consideration both technical analysis and option mathematics so that you can reduce risk and enhance return of your portfolio.

You find will three chapters:

- 1. Bullish Swings (with three picks featuring "buy call", "debit call spread" and "credit put spread" option strategies.**
- 2. Bearish Swings (with one pick featuring "buy put", "credit call spread" and "debit put spread" option strategies.**
- 3. Other Trading Strategies (buy/sell stock, naked put and sell covered call).**

We send entry/exit alerts for the following strategies: "buy call", "debit call spread", "credit put spread", "buy put", "credit call spread" and "debit put spread".

Please feel free to mailto: [swings@optionsmart.com](mailto:swings@optionsmart.com) if you have questions about this newsletter and option trading in general.

## SHORT GLOSSARY

**Break-even.** Point at which gains equal losses. This is the market price that a stock must reach for an option to avoid loss if exercised. For a call, the break-even equals the strike plus the premium paid.

**Call option.** The right, but not the obligation, to buy the stock at a predetermined price (also known as the strike) at any moment before the expiration date for a paying a premium.

**Put Option** - the right, but not the obligation, to sell stock at a predetermined price (also known as a strike) at any moment before the expiration date.

**Expiration Date.** The day when an option contract becomes void (the Saturday after the third Friday of the expiration)

**In-the-Money Option.** An option that has intrinsic value. A call (put) option is in-the-money if the strike is less (greater) than the current market price of the stock.

**intrinsic value:** The value of an option if it were to expire immediately with the underlying stock at its current price or the amount by which an option is in-the-money. For call options, this is the difference between the stock price and the striking price, if that difference is a positive number, or zero otherwise. For put options it is the difference between the striking price and the stock price if that difference is positive and zero otherwise.

**Spread.** A position with long and short options of the same type on the same underlying stock or index.

**Time Value.** Amount by which the current market price of an option exceeds its intrinsic value (the difference between the stock price and the strike). This additional value of an option is due to the volatility of the market and the time remaining
